REMOVE SPRAY

Our StoCare Remove range is a silicone based, alcohol-free medical adhesive remover which can be used to ease discomfort and prevent skin damage when removing adhesive appliances or dressings.

Effective non-sting formula

Kind to Patients Skin

UK Manufactured

Latest bag-on-valve technology

StoCare® REMOVE Spray

Gentle and effective removal of adhesive appliances and dressings

StoCare Remove is designed to ease discomfort and prevent skin damage when removing the appliance from the skin. A medical adhesive remover can be particularly helpful in the presence of diseased, damaged, or fragile skin. Post-operatively, an adhesive remover reduces the time taken to change an appliance and also lessens the anticipatory fear of the procedure.

MARSI

Medical adhesive-related skin injuries (MARSI) occur when superficial layers of skin are injured by the repeated removal of adhesive products. MARSI can result in infection, pain and loss of skin integrity.

Stoma patients are constantly at risk of skin damage, especially in the very young, the very old or those with comorbidities such as diabetes, malnutrition and dehydration. Severe cases of MARSI, often lead to increased costs as the patient may require:

- More frequent appliance changes and therefore resources
- Increased health professional time

StoCare Remove can be used as a preventative measure for MARSI helping to remove the appliance or dressing from the skin without compromising skin integrity or new appliance adhesion.

Bag-on-Valve technology

StoCare Remove spray uses bag-on-valve technology to maximise emptying of the can. In addition, the spray does not feel cold on your patients' skin and can be sprayed at any angle.

More Product.... Less Wastage
